Note: This is just a template to illustrate the different sections. Typically you would not write your documents in Microsoft Word, but rather some kind of content system.

Title

Description

URL

```
{Method} http(s)://{domain}/resources
```

Query Parameters

Parameter	Description	Type	Required	Notes

Headers

Header Name	Description	Required	Values

POST or PUT Body

Element	Description	Type	Required	Notes

Sample Request

```
{Method} http(s)://{domain}/resources?query1=value1&query2=value2

Header1: Value1
```

```
Header2: Value2

{
    "element1":value1,
    "element2":value2
}
```

Response

(Sometimes this information will be in an Objects section, and this section will just link to it.)

Element	Description	Type	Notes

Sample Response

(Sometimes this information will be in an Objects section, and this section will just link to it.)

```
{
    "element1":value1,
    "element2":value2
}
```

Status Codes and Errors

(Sometimes this information is general for the entire API.)

The following table lists the returned HTTP status codes.

Code	Description	Notes
